

# The Struggle for Power and Leadership in the Far Eastern Frontier in 1917–1922: Northeast China as a Recipient Region of the Russian White Movement

Olga Zalesskaia\*

## Introduction

Northeast China (Dongbei, Manchuria) is the regional entity in the People's Republic of China, directly bordering Russia's Far East territories. In its current state, this region comprises Heilongjiang, Jilin and Liaoning provinces. For more than 150 years, a unique historical experience of inter-civilizational contacts has been accumulated here. And in general, the entire historical process of development of the Russian Far East is inextricably linked with Northeast China.

This interrelation and interdependence was revealed vividly in the first half of the twentieth century, when the East Asian subsystem of international relations underwent serious transformations. The Xinhai Revolution, China's political fragmentation, Japan's pan-Asian plans, revolutionary and socialist transformations in the Russian Far East, and rapid global political change, irreversibly transformed the historical and geographical field of the Far Eastern region, integrated it under new conditions into the Asia-Pacific subsystem, and permanently changed it. Northeast China played the most direct role in these transformations, acting as a military springboard, or as a "gathering force" territory, but always as a field of close interaction between two civilizations (Russian Orthodox and Confucian) during a period of socio-economic and political transformations, and at the same time as an exceptionally significant part of the Far Eastern frontier

The concept of "frontier," was first introduced into scientific circulation by the American historian Frederick Turner (1861–1932) in 1893. The concept of "frontier" gradually began to acquire a broader historical, geopolitical and cultural significance. Today, the concept of "frontier" is used to characterize the contact zone between countries, peoples and cultures; it is understood as a transitional border zone in which interaction between two or more different cultures or political structures occurs. Unlike the dividing linear border, the frontier is understood primarily as a connecting transitional zone of interaction between two or more cultures and/or political structures.<sup>1</sup> This is always a very dynamic, variable zone, the most important sign of which is the state of unstable equilibrium (including military-

political instability). Thus, the state structure and political regimes within the frontier have a direct impact on its essence and characteristics.<sup>2</sup>

In the Far East, such a zone of interaction is located in the border areas of two neighboring countries, Russia and China. It can be defined as the Far Eastern frontier, and, because of its importance, needs scrupulous study, reflection and synthesis.

The historical process of Russian-Chinese border cooperation in the Far East began in the second half of the nineteenth century. After the signing of the Aigun and Beijing Treaties, the active settlement of the south territories of the Russian Far East began by settlers from the western regions of Russia, and the settlement of the Northeast China territories began by Chinese people from the central regions of China. The invasion of the imperialist powers in China and its transformation into a semi-colonial country led to the emergence of a layer of Chinese coolies who went to work outside their homeland and comprised a significant part of Chinese migration. In the typology suggested by William Petersen, this migration of coolies is defined as “impelled migration.”<sup>3</sup> In the period 1851–1925, around 1.9 million Chinese coolies moved out of China under labor contracts.<sup>4</sup> Chinese migration to the Russian Far East became a part of the general flow of Chinese migrants seeking a better life abroad. The Russian Far East was the third most attractive region in the world (after Southeast Asia and America) for Chinese migrants.

Meanwhile, since the early 1880s, an active development and settlement of the Far Eastern territories was occurring. In 1858–1882, about twelve thousand peasants arrived in the Amur Region, and then in 1883–1900, 83.5 thousand (seven times more) arrived. The main reason for this movement of people was the issuing (since 1889) by the state of a relocation loan and a home improvement loan to immigrants.<sup>5</sup>

In the geopolitical space of the Far East, during the process of agricultural, industrial and transport development of the border areas of both countries, the convergence of two civilizations and the process of Russian-Chinese inter-civilization interaction had begun. At the same time, the largest contact zone of this interaction, the Far Eastern frontier, had been formed here. This was due to the exceptional geopolitical and geographical proximity of the regions of these two countries.

At the same time, in the emerging Far Eastern frontier, a serious geopolitical rivalry of the imperialist powers unfolded. In the second half of the nineteenth and early twentieth centuries the main objectives of Russian policy in the Far East were the organization of regional defense and the expansion of influence to the south — consolidation in China and Korea. Russia, like Japan, considered Northeast China a giant market, a source of raw materials, a sphere of capital investment and an opportunity for

the exploitation of cheap labor. Russia's active foreign policy in Manchuria, the "Chinese straightening" of the Trans-Siberian Railway (which the Chinese Eastern Railway became), the seizure of the Liaodong Peninsula and favorable strategic positions for the Russian fleet — all this caused a fierce rivalry with the rapidly developing Japan.

Half-reform after the defeat of Russia in the Russo-Japanese War of 1904–1905 and the First Russian Revolution of 1905–1907 did not change the growing systemic crisis of the state and society. Nine years after Portsmouth, Russia re-entered a war, which contributed to the collapse of the monarchical and post-February 1917 political regimes.

The First World War made significant adjustments to the population processes in the Far East. Firstly, it caused a sharp decline in the influx of peasant migrants and workers: in 1914, 14.2 thousand peasants and Cossacks and 34.3 thousand workers arrived in the Far East and then in 1915, 2.5 thousand and 5.7 thousand, respectively, arrived. Secondly, a significant outflow of the Russian population began. This outflow was associated with military mobilization. Thirdly, in connection with the suspension of the law of June 21, 1910, which limited immigration from neighboring Asian countries, the influx from China and Korea began to increase, and as a result, in 1916, about 150 thousand foreigners were officially registered in the Far East (their share in the composition of the population increased to 14.8%).<sup>6</sup> In the Russian Far East, new types of migration were emerging: refugees from war-affected areas and prisoners of war.

The ruling political elite of Russia, the top military and financial circles, failed to recognize the depth of the crisis, so they paid cruelly in the upcoming Civil War. In 1917–1922, during the years of revolutionary transformations, civil war and intervention in the Russian Far East, a territory with certain characteristics formed in a border zone of interaction. Its main patterns — Russian emigration (both its peaceful part and the armed White Guard units), the Chinese Eastern Railway (CER), border and migration services, smuggling, honghuzi, etc. — had led to the existence of a special diffuse and permeable world, where different cultures, ethnic groups, historical memory, etc. mixed.

In this article, the process of struggle of various political groups for power and leadership in the Far Eastern frontier is considered. The article focuses on the historical process of the emergence and deployment of the White Movement in Northeast China in 1917–1922 during the revolutionary transformations, civil war and intervention in the Russian Far East. In this work, the author claims that Northeast China became a kind of recipient region, and a host for the White forces. This, in turn, was due to the formation of a pattern of White emigration in this territory. The author characterizes in detail the activities of the White Movement leaders in the formation of these detachments, the position of the Chinese authorities and their participation in the formation of White Guard armed organizations. To support these arguments, the author studies the struggle for leadership in the White Movement and the formation of the White Guard detachments in Northeast China by leaders of the White forces. The article examines the historical background of these processes, the changes in the political status of the

<sup>6</sup> *Dal'nii Vostok Rossii v period revoliutsii 1917 goda i grazhdanskoi voiny [The Russian Far East during the Revolutions of 1917 and the Civil War]* (Vladivostok: Dalnauka Publishing House, 2003), 58–59.

White Movement leaders and Russian emigrants as participants of these detachments.

The chronological framework of the study is 1917–1922, which was a period of vigorous struggle by White movement political groups and their active consolidation of armed forces. After the end of the civil war in the Far East, this struggle continued into the 1920s and 1930s. However, the White Movement had already become the losing party, and despite the continued provocations and attacks on Soviet territory, the White Movement geographically finally established itself in Northeast China. As a result, the Far Eastern frontier ceased to play such a significant role for the White leaders as it had in 1917–1922.

The struggle for leadership in Northeast China is analyzed through Russian-Chinese interaction in the Far East contact zone, where all the conditions for this interaction were formed, and the relations of the Russian and Chinese population had historically evolved for several decades. The article also describes in detail the using of the Honghuzi by different political groups during the struggle for power. The article was written using a significant amount of unpublished materials from Russian central and regional archives and Chinese sources.

### **Formation of New Patterns**

1917–1922 was a special period in the relations between the two countries. By this time, a communication pattern of interaction had already formed in the geopolitical space of the Far Eastern frontier. The attractor of this pattern was the Chinese Eastern Railway (CER) and the city of Harbin, where Russians concentrated as representatives and translators of Russian culture.

The emigration of Russians to Harbin and to the cities of Northeast China began with the construction and commissioning of the CER. This Railway was the project of a Russian colonial initiative in China and rivaled such gigantic projects as the Trans-Canadian and the Great Northern (U.S.) railways. Due to its construction, Manchuria changed from a largely unsettled wilderness into an area of rapid industrialization. It was, nevertheless, “competitive colonialism,” since, although Russia initially invested its capital and labor here, in the following years (almost half a century) both China and Japan took active steps to develop this territory and manage the roads.<sup>7</sup>

To a large extent, the intensification of China’s colonization policy in Manchuria at the beginning of the twentieth century was associated with the construction of the CER. In 1907, the population in Northeast China was 16.8 million people, in 1912 it was 19.7 million, and in 1917 it was 21.1 million. Previously unused lands were actively plowed up. In 1911, in Heilongjiang province 29.3 million mu<sup>8</sup> of land was under the plow; in 1912, 31.5 million mu; and in 1917, 38.6 million mu.<sup>9</sup> In general, for China the issue of the CER was “one of the three most significant threats” to its sovereignty,

along with the issue of Russian concessions in China and the issue of Outer Mongolia.<sup>10</sup> The territory along the Chinese East Railway was allocated to a special zone — the CER exclusion zone, where the Russians carried out administrative, judicial, and security functions.

The Russians initiated the creation of Harbin, which had not previously existed on the world map, and which became the key point of the CER and then the largest city in Northeast China. In 1913, in Harbin, including the suburbs, there were about 110 thousand people. The population of Harbin and its suburbs was represented by 53 nationalities, among them Russians (50.1%) and Chinese (34.3%) prevailed. Until 1917, the emigration of Russians to Northeast China was of an economic nature, they comprised mainly owners and agents of industrial and commercial enterprises, serving workers of the CER and their families (the wages of Russians on the CER were much higher than the wages of Chinese nationals). The head of the CER from 1902 was General Dmitry Horvath.<sup>11</sup>

Meanwhile, the socio-economic and political situation in China was very difficult. The Xinhai Revolution of 1911–1913, and the end of dynastic rule in China, led to the division of the country into North and South. In the North, in the provinces bordering on the Russian Far East, the period of political domination of the Beiyang (northern) militarists began. It was formally a constitutional regime, and in fact a regime of eastern despotism, where the “small” and “medium despotisms” of subnational scale — regional and provincial — prospered. Successive military-political groups controlled the activities of the state institutions in Chinese society. This was a completely new phenomenon in Chinese history: Chinese generals never before had possessed such military and political power at the same time, and their actions for the first time were not aimed at changing the dynasty, but rather at creating a new “dynastiless” state formation.<sup>12</sup> The Beiyang militarism regime in Northeast China existed until the late 1920s.

At the same time, in 1917–1922 Northeast China became a refuge for Russian emigrants, as well as a base for the formation of White Guard units. The emigration wave of Russians to Manchuria of the late nineteenth and early twentieth centuries was replaced by waves of political emigration by members of the Russian nobility, bureaucracy, bourgeoisie, burghers and peasants who did not accept the revolution; and by waves of the former White Guard soldiers and officers who were defeated in their opposition to the Red troops.

The number of Russians in Northeast China during the civil war in the Far East can only be estimated because of the primitiveness of the registration system, problems with passports and work permits. Most researchers believe that more than 200 thousand Russians were living in Manchuria in the early 1920s. Therefore, according to Chinese sources, in 1922 the number of Russian emigrants in

Harbin was 155 thousand people, and in the whole Heilongjiang province more than 200 thousand Russian emigrants.<sup>13</sup>

Thus, by the early 1920s in Northeast China, a pattern of Russian emigration presence was formed, creating a special contact zone of intercultural interaction of the Russian and Chinese people. The CER and Harbin became the matrices of this interaction, and, at the same time, were greatly influenced (in economic, political, cultural sense) by the pattern formed in the Far Eastern frontier. The mass resettlement of Russians to Northeast China (some of whom were lumpens, swindlers, and thieves) made local Chinese authorities worry. Every day, Chinese newspapers published the figures of Russians newly arriving in Northeast China. As a result, in only one day, on November 18, 1919, 1,018 refugees arrived in Harbin.<sup>14</sup> The increase in the number of emigrants in Harbin contributed not only to the influx of Russian capital into the city's economy, but also had a direct impact on the increased number of thefts, small street robberies, counterfeiting, etc.

In 1920, the Chinese administration tightened the rules for Russian emigrants. It became increasingly difficult for Russians to find accommodation, to move from apartment to apartment, from hotel to hotel. The decree of President of the Republic of China Xu Shichang on September 23, 1920, ceased the activities of N.A. Kudashev, the Russian envoy in Beijing, and of the Russian consuls in China. Russian emigrants in China were deprived of all their rights and privileges and passed into complete subordination to the Chinese authorities. Criminal cases of Russian citizens in China and lawsuits between Russians and citizens of the Republic of China were submitted to the jurisdiction of the Chinese courts and the Chinese Ministry of Justice.<sup>15</sup>

On October 30, 1920, the Council of Ministers of the Republic of China approved the "Rules of administrative subordination of Russian citizens living in China." According to these rules, Russian citizens were now obliged to obey Chinese laws. For trips inside the country, Russian citizens residing in China had to apply to the office of the foreign affairs commissioner for issuing a security list, and had to state the purpose, place and time of travel in the application.<sup>16</sup>

The Chinese authorities abolished the Russian security guard. Chinese troops started guarding the CER. On January 1921, the Russian postal service was liquidated in China. The Chinese authorities closed all Russian post offices in the CER Zone, their place was taken by Chinese post offices. The CER Zone was included in the general postal network of the Republic of China. On March 5, 1921, the Administration of the civilian section of the CER was liquidated; on March 17 of the same year, office-work in Russian was discontinued.<sup>17</sup> On May 7, 1922, it was announced that all Russian firms should

add Chinese text on the signboards indicating the type of enterprise. This was motivated by the inconvenience encountered during the audit of commercial enterprises, and the fact that the property of all Russians in the CER Zone was under the protection of the Chinese authorities.<sup>18</sup>

In its turn, the Soviet government deprived of citizenship all former Russian citizens who had lived abroad for more than five years, i.e., from pre-revolutionary time. Those who left Russia after November 7, 1917 without the permission of the Soviet government were also deprived of their citizenship, as well as those who voluntarily fought against Soviet power, and those who lived abroad without documents issued by the Soviet government. The Russian envoy in Beijing N.A. Kudashev, the Russian general consuls in Shanghai, Mukden, Harbin, the members of these diplomatic missions were dismissed without the right to subsequently hold any public office and without the right to have a pension.<sup>19</sup>

Russian emigrants, arriving in China, started a new life — often without means of subsistence, and without knowing the language. Some returned to Russia, where repression and labor camps were waiting for them; others, separated from their homeland, took to drink, and/or committed suicide; still others tried to adapt to difficult living conditions in a foreign country.

The emigrants from Russia who came to China needed to find work and housing in a new place. In Northeast China, in contrast to Europe, before October 1917 many Russian enterprises were already created — forest concessions, sugar and meat processing plants, coal mines, etc. Russian emigrants, having got a job at Russian enterprises, did not experience difficulties in communication, but limited jobs forced them to look for work in the Chinese labor market, where they could not compete with Chinese workers who were willing to work for a very low salary. Ignorance of the Chinese language also complicated job searching. Therefore, a huge number of emigrants lived in difficult material conditions, having odd jobs. This was one of the factors that determined the participation of a part of Russian emigrants as mercenaries for Chinese militarists and in the White Guard troops.

The historical process of the existence of Russian emigration pattern in Northeast China took place under conditions of constant Russian-Chinese interaction in this contact zone. Russians and Chinese lived and worked together. Part of the Chinese population received Russian general and professional education. Chinese youth studied at universities in Harbin together with Russian youth. The creation of centers of Russian culture in Manchuria contributed to the modernization and development of Chinese culture and science. At the same time, in contrast to Russian emigrants in European countries, which demographically and culturally dissolved gradually among the local population, the Russian diaspora in Northeast China was neither acculturated nor assimilated by Chinese civilization until the late of 1940s. So, it was a unique phenomenon in the historical and geographical field of the Far Eastern frontier.

## Power Struggle between Different Political Forces

The October Revolution, in contrast to the February Revolution, marked a new stage in Russian-Chinese relations. On November 1917, the People's Commissariat of Foreign Affairs sent Liu Jingren, the Chinese envoy in Russia, a proposal to create a Russian-Chinese mixed commission to regulate CER issues, and on December 12, 1917, the Harbin Council (Soviet) of Workers and Soldiers Deputies declared itself the only power body in the CER Zone. These projects and military adventures were negatively perceived by the Beijing government and Chinese society. Commissar of the Provisional Government on the CER General Dmitry Horvath asked the Chinese authorities for help. On December 24, 1917, the Chinese authorities presented the Council with an ultimatum on expulsion from Harbin of the revolutionary guards and on the dissolution of the Council.<sup>20</sup> The 618th and 559th Russian security guards in Harbin, which supported the Council, were disarmed, and the soldiers were deported from Manchuria.

After the unsuccessful attempt of the Harbin Soviet to establish its power in the CER Zone, Horvath made efforts to preserve his authority and prevent the CER from being transferred to Soviet Russia. The Russian envoy in Beijing, N.A. Kudashev, reported to Admiral A.V. Kolchak: "Horvath considers it necessary to form a board of the CER, which would be able, somehow, to fulfill its Russian interests."<sup>21</sup> In the Far Eastern region, meanwhile, the intervention of the imperialist powers began: on November 1917, the U.S. cruiser USS Brooklyn arrived at the port of Vladivostok, and in January 1918, Japanese and British warships entered the Golden Horn Bay.

On December 27, 1917, the Russian Government abolished the Russian-Asian Bank, which was one of the parties signing the contract for the construction of the CER in 1896. At the meeting of the new board of the Russian-Asian Bank in Paris on January 15, 1918, a project of formation for the new board of the Chinese Eastern Railway in Beijing was adopted. A new board of CER was established, headed by the chairman and governor of Jilin Province, Guo Zongxi. Horvath was appointed as a vice-chairman. The board also consisted of A.V. Kolchak, A.I. Putilov, L.A. Ustrugov, V.S. Yezersky, N.A. Konovalov, and Z.V. Slauta.

At the beginning of 1918, the "Far Eastern Committee for the Defense of the Motherland and the Constituent Assembly" was created in Harbin, headed by V.I. Alexandrov, a lawyer, and joined by Horvath. On February 10, 1918, the Committee announced the beginning of the formation of the "Far Eastern Corps of Defense of the Motherland and the Constituent Assembly," which should have become a shock force against Soviet power in the Far East. The "Conditions for Chinese volunteers entering the formation of auxiliary units at the 1st Special Detachment of the Far Eastern Homeland Defense Corps and the Constituent Assembly of the Russian State"<sup>22</sup> were developed. The auxiliary units were

<sup>20</sup> *Zhong E guanxi shiliao (1917–1919): Zhongdong tielu [Documents on Sino-Russian Relations (1917–1919): China Eastern Railway]* (Beijing: Institute of Modern History, Academica Sinica, 1960), 6–8.

<sup>21</sup> *Kolchak Aleksandr Vasil'evich – poslednie dni zhizni [Kolchak Alexander Vasilievich — The Last Days of Life]* (Barnaul: Altay Publishing House, 1991), 168.

<sup>22</sup> *Gosudarstvennyi Arkhiv Rossiiskoi Federatsii [State Archive of Russian Federation] (Hereafter, GARF), fond R-540 (Shtab Okhrannoï strazhi KVZHD. Harbin. 1919), inv.1, file 3, 7.*

created for the protection of warehouses, persons in custody, and for escorting trains with cargo.<sup>23</sup> On April 4, 1918, General M.M. Pleshkov, the commander of the “Far Eastern Committee for the Defense of the Motherland and the Constituent Assembly,” sent Horvath a request to ask the Chinese government for permission to recruit Republic of China citizens to these auxiliary units. By the beginning of 1918, on the territory of Northeast China, White Guard detachments of Russian emigrants and Chinese citizens were formed in Harbin, at Manchuria Station and at Suifenhe Station.

The vigorous activities of the Russian generals in the CER Zone caused concern among the local Chinese authorities and the Beijing government. The Governor of Heilongjiang Province, Bao Guiqing, on January 9, 1918, signed an order prohibiting the population to store weapons at home; weapons held by organizations and institutions were subject to strict registration.<sup>24</sup> The Beijing government, in its turn, refused to give consent to the admission of Chinese citizens as soldiers — they could only be hired as workers (*kuli*). However, in April 1918, 27 Russian officers were sent from Harbin to the CER stations to hire Chinese soldiers. They were supposed to recruit six squadrons each of 160 soldiers with a monthly salary of 80 rubles per soldier. This action provoked a sharp protest from the Beijing government, and at the end of April 1918, Horvath suspended recruitment.<sup>25</sup>

However, Ataman Georgiy Semenov refused to obey Horvath’s orders, despite his status as absolute leader of the White Movement in the Far East. The Special Manchurian Detachment (SMD) was formed by Semenov at the beginning of 1918 and had become a significant force. In the SMD (among the Russians, the Buryats, the Mongols, the Serbs and the Japanese), the Chinese also served under the leadership of dual officers: Russian officers commanded during hostilities, and Chinese officers were engaged in the internal routine during the periods between battles. The total number of Chinese in Semenov’s compounds was 1,300 soldiers.<sup>26</sup> Semenov believed that, “large ... military units from different nationalities would secure the armed forces from simultaneous political collapse. Such organization made it possible to use the national antagonism that had long existed between the Mongols and the Chinese.”<sup>27</sup> In Semenov’s order for SMD, “On awarding persons who excelled in cases against the Bolsheviks,” dated June 25, 1918, among the 82 soldiers awarded with St. George’s crosses and medals were 47 Chinese citizens, 35 of which were privates, seven junior and senior noncommissioned officers, four platoon commanders, and one sergeant.<sup>28</sup>

Refusing to obey anyone, Semenov and his units freely moved in the territory of Northeast China, freely crossing the Russian-Chinese border. There was evidence of his robberies of Chinese traders. So, on January 1918, he detained more than 70 traveling salesmen of the “Anyuy” and

“Yuchende” Harbin firms and confiscated all their cash.<sup>29</sup> The attempts to disarm Semenov by Chinese local authorities and Chinese militarist generals were unsuccessful. General Horvath tried to remove Semenov from Northeast China but failed. Unable to disarm Semenov in Manchuria, Chinese local authorities agreed not to release him into Russian territory until April 5, 1918, but in fact the Chinese administration did not control Semenov’s actions absolutely. During the negotiations at Matsievskaya Station, on April 6, 1918, the representatives of the authorities of Northeast China — Assistant Chief of Staff under the Directorate of the Governor General of Heilongjiang Province, General Hong Luanming and Colonel, Senior Adjutant Baizu Yi — stated to Soviet leaders of Siberia that they were neutral towards Semenov’s detachments. The 20-day guarantee not to release Semenov’s units from the borders of China ended, and the Chinese delegation refused to give a secondary guarantee of this kind.

In April–May 1918, Semenov’s units that had formed in Manchuria began to invade the territory of Primorye and Transbaikalia. In May 1918, the People’s Commissar for Foreign Affairs of the Soviet government G.V. Chicherin sent a note to the Chinese commission in Petrograd, in which he protested against the provision of operational bases to the White Guard units and to the Japanese command to attack Soviet Russia territory.<sup>30</sup> The Beijing government did not reply to this note.

At the end of July 1918, after defeats in battles with the Red Army detachments, the Semenov detachments fled back to Northeast China again. Commander of the Trans-Baikal Front S.G. Lazo began negotiations with the Chinese authorities about the disarmament of Semenov. The Chinese authorities had concerns that if Semenov’s detachments were disbanded, the Lazo troops might invade Manchuria. Therefore, the signing of the agreement would be broken.<sup>31</sup>

Meanwhile, on August 15, 1918, Japan began to transfer seven divisions of the Kwantung Army, which consisted of 84 thousand soldiers, to North Manchuria.<sup>32</sup> Japanese troops were located along the line of the Chinese Eastern Railway from Harbin to Manchuria Station. The entry of Japanese troops was so sudden that the Beijing government did not have time to warn the local authorities of Heilongjiang and Jilin provinces. It provoked numerous protests from the provincial governors. At the end of August, however, the head of the Anhui military clique Duan Qirui appealed to the authorities of the Heilongjiang and Jilin provinces with the statement to establish “warm and harmonious relations with the Japanese troops.”<sup>33</sup>

In September 1918, the entry of Japanese troops into Transbaikalia began, their numbers reaching 40 thousand soldiers.<sup>34</sup> Japanese troops took control of the central section of the Siberian Railway, while the White Guard detachments of Ataman Semenov occupied Chita town.

During the civil war and intervention in the Far East, Northeast China became a haven for leaders of various political parties and organizations. At the beginning of March 1918, members of the Provisional Government of Autonomous Siberia (PGAS), elected by the Siberian Regional Duma, fled from Tomsk and arrived in Harbin. On January 26, 1918, the executive committee of the Tomsk Soviet declared the Duma dissolved. The chairman of the PGAS and at the same time the Minister of Agriculture, P. Derber, went to Harbin. Although Horvath did not welcome the appearance of Derber in Harbin, he, nevertheless, provided the wagon for accommodation of the RGAS members at Harbin Station.

All the attempts of the Derber government to obtain official recognition from the commanders of the interventionist forces ended in failure. At the end of March 1918, the Allies of the White Movement came to the conclusion that the government of Derber was unable to lead the fight against the Bolsheviks in the Far East. The capture of power by PGAS in Vladivostok on June 29, 1918 (with the help of Czechoslovakian legionnaires), did not influence the decision of the Allies to put General Horvath and Admiral A.V. Kolchak in charge of the White Movement in the Far East. Horvath, in his appeal on July 9, 1918, as the “only remaining representative of the Provisional Government,” proclaimed himself the Temporary Ruler and announced the formation of a Business Cabinet, headed by V.S. Orientin, a former member of the third and fourth State Duma. “I decided to take full state authority until the restoration of order, with the assistance of the people, in Russia and until the convening of a freely elected Constituent Assembly, which would establish the form of government of the Russian state,” Horvath explained in his declaration.<sup>35</sup> On July 10, 1918, during a meeting of the PGAS Council of Ministers under the chairmanship of P. Derber, the decision to “unite all the forces of democracy in the fight against the looming dictatorship of General Horvath” was made.<sup>36</sup>

The power struggle continued until September 1918, when the chairman of the Council of Ministers of the Provisional Siberian Government, P.V. Vologodsky, arrived in Vladivostok. After long negotiations, Horvath declared his submission to Vologodsky, accepting the position of authorized Siberian Government in Vladivostok. On September 23, 1918, a Directory of five men was created in Ufa (N.D. Avksentyev, V.M. Zenzinov, V.G. Boldyrev, V.A. Vinogradov, and P.V. Vologodskii), proclaiming itself the “Provisional Government of All Russia.” The main tasks of the Ufa Directory were: the struggle for the overthrow of Soviet power, the annulment of the Brest peace and the continuation of the war against Germany, together with the Allies. The Provisional Government of Autonomous Siberia was self-abolished. In October 1918, the Directory moved to Omsk.

<sup>36</sup> GARF fond R-175, (Sovet ministrov Vremennogo pravitel'stva avtonomnoi Sibiri) inv.1, file 11, 1.

In the middle of October 1918, Admiral Kolchak arrived in Omsk. On November 4, he was given the post of military and maritime minister of the Directory Government. On the night of November 18, 1918, a coup took place in Omsk to establish a military dictatorship. The leading figures of the Directory were arrested, and A.V. Kolchak got the post of Supreme Ruler of the Government of All Russia. Horvath became the High Commissioner of this Government in the Far East.

After the coup of November 18, 1918, the power of Admiral A.V. Kolchak as the Supreme Ruler and the Commander-in-Chief was recognized by all the provisional governments that had been formed in 1918 on the territory of the Far East. Only Ataman Semenov refused to obey, expressing his desire to know the position and the goals of the new government first. In response, Semenov received Order No. 61 from Omsk, which stated that he was dismissed from all posts and from the command of the White Cossack troops in Transbaikalia for disobeying the Supreme Ruler. Further attempts by A.V. Kolchak to bring Semenov's troops under control were met with resistance by the Ataman, who was supported by Japanese troops, threatening Kolchak with a complete break in relations in the case force was used against Semenov. The conflict was settled only in the spring of 1919, when the order to remove Semenov from all posts was canceled.<sup>37</sup>

Using Semenov's Cossack troops, Japan attempted to realize the plan of the formation of the "Great Mongolian State" — a union of Outer Mongolia, Inner Mongolia and Barga (part of China) and Buryat-Mongolia (part of Russia) under the Japanese protectorate. In 1919, Semenov organized a Pan-Mongolian government at Dauria Station. However, after the fall of the Omsk government in 1920, Barga again came under Chinese rule.

### **Formation and Activities of the White Guard Detachments in Northeast China**

In the autumn of 1919, the units of the Red Army inflicted a series of serious defeats on Kolchak. On November 14, 1919, Omsk was taken by Red troops.

Under the apparent weakness of the Kolchak regime in Siberia and the Far East, the activities of moderate socialist parties were intensifying. In November 1919, in Irkutsk, the Political Center, a body of the "Temporary Revolutionary Government" was formed. In December 1919 – January 1920, the Political Center took an active part in organizing the overthrow of Kolchak government. The Political Center, aiming to stabilize the situation in the region, put forward the idea of forming an autonomous democratic buffer state entity. On January 21, 1920, the idea of a "buffer" was approved by V.I. Lenin. On April 6, 1920, a congress of workers in the Baikal region proclaimed the formation of the Far Eastern Republic (FER). Formally, the FER was an independent state, but the leadership by Dalbureau provided on its territory corresponded to the program settings of the Soviet Russian party leadership.

In the spring of 1920, the power of the FER extended only to the territory of the Baikal region. The actual unification of Transbaikalia, the Baikal region and the Amur region as parts of the FER occurred at the end of October 1920. In general, the FER existed until the end of 1922, when in the

---

<sup>37</sup> "Delo ne poluchilo blagosloveniiia Boga:" *Publitsistika i memuary belykh*, 63–66.

autumn of 1922, with the liberation of Primorye from invaders and White Guards, the civil war in the Far East ended.

Meanwhile, anti-Bolshevik forces carried out successful attempts to seize power. After the coup of May 26, 1921, in Primorye, power was transferred to the “Provisional Amur Government” under the chairmanship of S.D. Merkulov. The Merkulov government decided to create an internal front by forming white insurgent detachments numbering from 100 to 400 soldiers, and their task was to organize an uprising on the territory of the FER and insurrection in the CER Zone, and consolidation with the insurgent population. The first attack of the White Guards was prepared by the middle of July 1921.

To organize an uprising on the Far Eastern Republic territory, the Merkulov’s government appointed its representatives to the regions bordering the FER. In the spring of 1921, the Amur Military Organization operated on the territory of the Far Eastern frontier. Its leading centers were both in Chinese and Russian territories —there was the center in Sakhalyan (Heihe, China) under the leadership of General Serbinovich and there was the center in Blagoveshchensk (Russia) under the leadership of Prince Mayevsky. The actions of both organizations were strictly coordinated with each other. Acting with the full support of Chinese authorities and Japanese command, the Amur Military Organization was provided with funds by the Merkulov government and the monarchical organization of General Baryshnikov in Harbin. The members of the Military Organization, through Chinese merchants, had contacts with the White Movement in Blagoveshchensk, Trans-Baikal and Amur regions, and through the Japanese military missions in China. Their aim was the organization of a coup in the Amur region. The detachments of the Amur Military Organization, which had an aim to attack Blagoveshchensk, were located in Fujin, Sakhalyan and other Chinese cities. Its cells were organized also on the Russian side of Amur River from Lahasusu to Mohe. They published and distributed leaflets, brochures and the “Headquarter of the Amur Military Organization” newsletter. Subsequently, the armed intervention of the White Army units in the Amur Region was prevented by officers of the Soviet State Political Bureau. Subsequently, 38 leaders and members of the Amur Military Organization were arrested.<sup>38</sup>

According to the Provisional Amur Government decision for the organization of the White Movement in the Transbaikalia region, dated May 23, 1922, I.F. Shilnikov, Major General of the Transbaikalian Cossack Army, was appointed as a representative of the Merkulov government in Transbaikalia. The headquarters of the Shilnikov organization was created, which consisted of four main divisions: recruiting, counterintelligence, operational, and sanitary. In August 1922, Semenov’s General Zolotukhin and Officer Pogodaev (the latter was famous for his atrocities during Baron Ungern’s time) arrived in Vladivostok to Shilnikov’s headquarters. To the beginning of the autumn of 1922, about 3,000 people were recruited into Shilnikov’s White troops. The organization was financed by the Merkulov government and by Russian trade enterprises located in the CER Zone (Siberian

---

<sup>38</sup> *Gosudarstvennyi arkhiv Khabarovskogo kraia [State Archive of Khabarovsk region]*, [Hereafgter, GAKHK] fond P-44 (Dal’nevostochnaia (oblastnaia) kraevaia komissiiia po sobraniuu i izucheniiu materialov po istorii Oktiabr’skoi revoliutsii i istorii RKP(b) (Dal’istpart) inv.1, file 279, 19–20, 516.

Butter-making Artel, Ural-Siberian Company, etc.). There were also the branches of the organization in Hailar under the leadership of General Matsievskii.

The headquarters of Shilnikov's organization was also located in Harbin under the leadership of Generals Baryshnikov, Pepeliaev, Pleshkov, Afanasyev, Petukhov, and others. On August 4, 1922 General Petukhov arrived in Mukden (he served Zhang Zuolin as the chief of the Russian artillery detachment) and began the formation of the officer detachment. General Afanasyev, under the guise of forming the internal guard of the CER, was engaged in recruiting Semenov and Kappel troops who had arrived from Primorye. General Pleshkov was also engaged in the formation of the White Army detachments. In June 1922, a large batch of Remington rifles, 30,000 sets of uniforms and 3,000 saddles, using Semenov's money, were purchased from the American "Simpson." According to the plan of General Pepeliaev (this plan was approved by the leaders of the White emigration), the beginning of the white insurrection uprising under the slogans "For Orthodox Faith," "For Russian National Government and Fatherland" was scheduled for July 1922. The plan of the White Rebellion uprising outlined by Shilnikov's headquarters was uncovered only because of the disclosure of the white organization in Chita by the Soviet State Political Bureau.<sup>39</sup>

In 1919, Ataman Semenov made to the Chinese militarist Zhang Zuolin, the ruler of the Three Northeastern Provinces of China (Heilongjiang, Jilin and Liaoning), a proposal to create mixed Russian-Chinese units. In 1921–1922, there were several thousand Russians in the units of Zhang Zuolin, and they served there on the following conditions: officers lower than colonel for 60 dayans (Chinese silver dollars) monthly; and sub-ensigns for thirty dayans; privates for twenty dayans monthly. In November 1922 in Zhang Zuolin's units, an aviation squad was formed. The adviser on the formation of Zhang Zuolin's cavalry was Semenov.<sup>40</sup> On the basis of Japanese troops, Semenov's detachments, Zhang Zuolin and Russian anti-Bolshevik elements in Northeast China, it was decided to create a League against Communism.

In the middle of April 1921, a meeting of the White Guard detachments leaders (G. M. Semenov, R. Ungern, B.V. Annenkov, and others) was held in Beijing, at which it was decided to start simultaneous intervention from Northeast China to Transbaikalia, Amur region, Siberia. In early June 1921, Semenov began to prepare for the transfer of his troops to Transbaikalia. But the United States, fearing that Japan would use Semenov's troops to capture the CER, managed to prevent the Beijing government and Zhang Zuolin from transporting Semenov's troops by the CER. On June 4, 1921, the Chinese authorities in Harbin announced that if Semenov arrived in Harbin, he would be arrested. The need for the arrest of Semenov was officially motivated by the fact that Semenov and his agents, taking large amounts of money from Chinese nationals, did not pay for the goods.<sup>41</sup>

In a letter dated October 3, 1922, Zhang Shouzheng, the head of Binjiang district in Jilin province, addressing to the special commissioner of the FER in the CER Zone, emphasized the neutrality of the headquarters of the CER security forces towards Russian political parties and

---

<sup>39</sup> GAKhK, fond R-44, inv.1, file 279, 16, 19, 515, 519.

<sup>41</sup> *Dal'nevostochnaia Respublika [Far Eastern Republic]*, June 22, 1921.

organizations. The ban of the Chinese authorities on the import of Russian weapons into the territory of China was confirmed. Zhang Shouzheng wrote, on October 29, 1922, that a White Guard detachment of more than 4,000 men who had arrived in Harbin from Vladivostok through Korea was disarmed by Chinese authorities.<sup>42</sup>

However, such actions by the Chinese authorities were occasional. Detachments of the White Guards, formed in Northeast China attacked Russian settlements and hid in Chinese territory. So, on May 31, 1921, the group of White Guards numbering about twenty persons crossed the Amur River and attacked the guard post in the village of Verhne-Blagoveshchensk. On the night of June 1 of the same year, the White Guards attacked the village of Korfovskii. With the assistance of Chinese soldiers, weapons intended for the White Guard were smuggled across the Amur River from Russian territory to the Chinese side. In Russian border villages, weapons for the White Guards were smuggled using the money of the Chinese garrisons' officers.<sup>43</sup> At the same time, the Chinese citizens, who came for seasonal work to the Far East, often worked as postmen for Russian officers in Manchuria and for the White Guard units on Russian territory.<sup>44</sup>

In 1922, the White Guard troops in Northeast China were formed by General I.F. Shilnikov at Manchuria Station, by General E.G. Sychev in Heihe, and by General G.E. Macieus in Hailar. On January 5, 1922, a detachment of Colonel Ilkov from Chinese territory raided the village of Nadezhdinskoe, where he took food from the farmers. On December 8, 1922, a detachment of Colonel Shashkin, consisting of Cossacks from the village of Lonchakovo, hid in Chinese territory. On December 15–16, White Guard detachments, numbering about 200, blew up railway bridges in the area of the Viazemskii — Dormidontovka line of the Ussuriiskaia Railway, and then the White Guards hid in Chinese territory. In September 1922, in the Chinese customs at Pogranichnaia Station, two wagons loaded with medical supplies were detained. Rifles were found in the supplies of medicine. The carriages were passed by order of Zhang Zuolin to allow all kinds of military cargo from Primorye to Northeast China.<sup>45</sup>

In Sakhalyan (Heihe — the Chinese city bordering Russia) the Chinese authorities allowed the presence of representatives of Ataman Semenov; these representatives assisted in organizing the Sychev detachment raids on Soviet territory. Sychev's groups regularly robbed smugglers and Chinese merchants, as well as sold opium and printed fake banknotes; their counterfeiters workshop was located in one of the brothels of Heihe. On the Chinese territory, opposite the Russian Platono-Aleksandrovskii village, there was the group of Colonel Ovechkin numbering sixty people; opposite the village of Iman there was an armed group of up to twenty people belonging to Colonel Shiriaev.<sup>46</sup> In the frontier zone

bordering the Russian Amur province, Chinese authorities transferred the White Guards to barracks, supplied them with weapons and cartridges and used their services as armed guards. The White Guard organizations of Larionov (near Manchuria Station), Gordeev (in Hailar and Manchuria Station), Kol'tsov (at Zhalaynor mines), Pereboev (at Zhalainor Station) and others freely acted in the Chinese Eastern Railway Zone. At Pogranichnaia Station, the union of “non-party” workers and employees of the CER issued certificates to the White Guards; and then the certificates were exchanged for Chinese passports. Through the same union, the members of the white formations officially received weapons. The passes for further movement on Chinese territory were issued to the White Guards in Sanchagou, where White Guards also bought illegal weapons and then sent them to Harbin.<sup>47</sup>

### Using Honghuzi Units in the Struggle for the Leadership

In the conditions of political instability, the population of the Russian Far East was attacked not only by the White Guard detachments, but also by the Honghuzi groups that had raided Russia from Northeast China. The participants of armed groups, which operated in Manchuria, from the middle of the nineteenth century until 1949, were called “Honghuzi” in Chinese — “red-bearded.” They were mostly either impoverished migrants, or Chinese fleeing to Manchuria from hard labor.

The Chinese authorities widely used the Honghuzi for military service. As regular troops, the Honghuzi learned the art of war and, after deserting, often formed well-trained and well-organized groups. During the First World War, the Honghuzi troops were financed by Germany to destabilize the situation in the Russian Far East; and were taught military skills by fleeing German prisoners. After Anglo-Japanese forces captured the German naval base of Qingdao in November 1914, the previously proposed plans were changed. The goal was now to carry out terror among the population in the Amur region and in the CER Zone. The security services of the Amur Region were confident that the attacks of the Honghuzi against the Russian villages were possible because of the activities of German organizations.<sup>48</sup>

During the civil war and intervention, the attacks of the Honghuzi to Russian territory continued. On March 19, 1921, they robbed the Lenin mine in the Amur region, and on March 20, they robbed the Ivanovsky mine.<sup>49</sup> On May 7, Lebedev, the head of the Primorsky regional police, mentioned that there were 600 Honghuzi at the Skidelsky mine. On June 21, 1921, one thousand Honghuzi attacked the village of Andreevka; on June 23, 500 Honghuzi, near the Chernigovka village (Nikolsk-Ussuriysk District), attacked the local police.<sup>50</sup> By October 1, 1921, the activities of Honghuzi groups were discovered in the area of Troitskaya village (240 miles down the Amur River from

<sup>48</sup> Tatiana Ikonnikova, *Dal'nevostochnyi tyl Rossii v gody pervoi mirovoi voiny [Far Eastern Rear of Russia during the First World War]* (Khabarovsk: Khabarovsk Publishing House, 1999), 45–46.

<sup>49</sup> *Rossiiskii gosudarstvennyi istoricheskii arkhiv Dal'nego Vostoka [Russian State Historical Archive of the Far East] [Hereafter, RGIA DV], fond R-4931, inv.1, file 59, 201, 203, 219.*

<sup>50</sup> *RGIA DV, fond R-944 (Upravlenie vnutrennimi delami Priamurskogo zemskogo kraia), inv.1, file 3, 2, 7.*

Khabarovsk), as well as in the villages of Vinogradovka, Ozernaya, Beltsevo and Semenovka.<sup>51</sup> On December 27, 1921, a Honghuzi detachment of about 500 people attacked the village of Blagoslovennoye in the Zavitskiy district of the Amur region. Twenty-three houses, a post office and a school were burned by the Honghuzi, 217 horses and seventeen cows were taken illegally to China. On April 20, 1922, the border village of Vaganovo was devastated by Honghuzi. The number of Honghuzi attacks to the stations and the trains of the CER increased as the Japanese command, trying to prove the Chinese authorities' inability to maintain order, set the Honghuzi the task of blowing up Railway bridges, destroying the railway, and attacking the peaceful population. This problem was repeatedly discussed during the conversations between the Board of the CER and representatives of the Chinese command. On August 21, 1921, a special mixed commission was formed to address these grave problems posed by the Honghuzi.<sup>52</sup>

The Japanese interventionists actively supported Honghuzi troops, supplying them with weapons, uniforms and money. After every attack by the Honghuzi, Japan reaffirmed the need for the Japanese troops to stay in Primorye to "restore order." During a closed meeting of the Vladivostok city government on September 22, 1922, a proposal by Japan to withdraw the Honghuzi from Primorye (on condition that the Provisional Amur Government would support all of Japan's activities) was mentioned.<sup>53</sup>

The government of the FER attempted to use the Honghuzi for its own purposes. On August 16, 1920, during the meeting of the Primorsky Regional Committee of the RCP, "it was recognized that it was possible to use Chinese organizations in the struggle we are carrying out in this land." On January 25, 1921, a Chinese Communist Liu Qian (assumed name Fedorov) arrived from Blagoveshchensk to Khabarovsk with a group of comrades. He began work to clarify the number of Chinese troops in the Far East. He found that among the Honghuzi troops, totaling 20,000 men, operating along the CER Zone right to Vladivostok, 1,600 fighters were ready to join the FER army. The Honghuzi Yun He, who acted with his detachment of 1,700 soldiers in the area of Iman, also agreed to support the troops of the FER.<sup>54</sup> Fedorov issued certificates of the Communist Party membership to all leaders of the Honghuzi, who agreed to cooperate with the revolutionary forces.

Fedorov conducted negotiations with Honghuzi detachments until the summer, but no appreciable results were achieved. Honghuzi groups who received certificates of membership to the Communist Party continued their robberies under communist slogans, so they lowered the authority of the Communist Party among the Chinese people. For the centralized consolidation of the Honghuzi, the commander of the Chinese battalion Sun Jiwu (assumed name "Yellow"), who fought in the summer of 1920 on the Ussuriisk front, was selected. The relevant work was carried out with him by the Amur

Department of the Soviet State Political Bureau,<sup>55</sup> because on July 1921 he went to Jilin Province of Northeast China with his detachment of up to 300 soldiers. Freely crossing the Russian-Chinese border, he began to fight as a partisan on Russian territory, and in China he participated in brushes with White Guard units, moving to Primorye and Amur region (in particular, with the brigade of General Sakharov). On August 1922, his detachments joined the Korean detachments, and Sun Jiwu was elected as the chairman of the Revolutionary Military Council of the partisan detachments of Jilin province.<sup>56</sup> Most commanders and ordinary soldiers of his detachment previously served as officers and soldiers in the army of Zhang Zuolin, or were Honghuzi. They were attracted to Sun Jiwu's detachment because they could submit application and receive 50–100 dayans from the detachment's food committee, and sent money to their families suffering from financial difficulties. The partisans obtained food and money by imposing a hard contribution on the population in the border cities and villages.

The total number of Chinese and Korean partisan detachments consolidated on the instructions with the help of Dalbureau of the Central Committee of the RCP was 3,300 men. Their task was to ensure the protection of communications on Chinese territory and on the right flank of the FER People Army's front when it attacked Vladivostok. To fulfill the intended goal, the command of the partisan detachments of the Khabarovsk district established a constant connection with Sun Jiwu, provided him with ammunition and machine guns, and coordinated military operations with him. The united partisan detachments had their own headquarters, political units, household units, medical units, veterinary units, machine-gun crews, separate rifle battalions (numbering 223 soldiers), and an artillery battery (17 soldiers).<sup>57</sup> The FER government concealed its involvement in the formation and activities of these detachments. During the official negotiations with the authorities of Northeast China, the FER government called the partisan detachments of Sun Jiwu as "Honghuzi detachments", insisting on the spontaneous nature of their formation and denying any contacts with these detachments, which, nevertheless, on October 1922 took active part in the final Primorsk operation and the assault on Spassk.

## Conclusions

After the October Revolution, during the period of civil war and intervention in the Russian Far East, Northeast China became a territory where the forces of the Russian counterrevolution were concentrated. This role of Northeast China, on the one hand, was predetermined by the presence of the CER Zone, where the Russian population lived and the Russian administration functioned. On the other hand, because of the dependence of the Beijing government and Zhang Zuolin (de facto the leader of Northeast China) on the imperialist powers, the White Movement leaders were able to form their troops in the territory of Northeast China. The presence of an anti-Bolshevik center here was one of the peculiarities of the historical and geographical field of the Far Eastern frontier during the civil war and

<sup>57</sup> *GAKhK*, fond P-44, inv.1, file 400, 1–4, 28–34.

intervention. In fact, in the territory of one country (China) there had been an ongoing struggle for leadership to achieve the goals of this struggle in the territory of another country (Russia). By its very nature, this struggle itself was caused by different political orientations of various groups and the personal ambitions of its leaders. Therefore, their global goal — victory over the Bolshevik regime — was not achieved.

Despite all attempts, the complete consolidation of military emigration in China, as well as in Europe, could not be implemented. The most important reasons for the unification process failures were: the absence or lack of remarkable leaders who could lead the process; strong political disunity; disappointment of a certain part of the former military in the ideals of the White movement, their recognition of the Soviet authorities and even cooperation with Soviet special agencies, financial insolvency, etc.

The formation of the White Guard detachments and their activities became possible because of political instability and the split of China, which ended only in 1949 with the Communists came to power and consolidated the country. China (namely, Northeast China) acted as the host country, as the recipient region, where not only the residence of Russian emigrants but also the creation of political parties and groups was allowed. The function of the recipient region of Northeast China became possible due to the fact that the Russian diaspora began to form here at the beginning of the 20th century, and before October 1917, the centers of Russian culture were formed here. Over the next decades, it promoted adaptation of Russian emigrants to living conditions in a foreign country. Moreover, before the occupation of Northeast China by Japanese troops, there was an opportunity for free access of education and creative growth, a brilliant galaxy of artists, musicians, writers and poets among the emigrants formed here. Despite the hard conditions of the political regime, which are incomparable with the living conditions of Russian emigrants in European countries, relations between the populations of the border areas of the Russian Far East and Northeast China, which had developed for several decades, contributed to overcoming inter-civilizational alienation and the formation of a special area of ethnocultural interaction in the Far Eastern frontier.

It should be noted that the political activity of adherents of the White Movement in China was in contradiction with the main thrust of the process of social adaptation in the host society. The process of social adaptation assumed the rejection of political activity and the continuation of the struggle against the Bolshevik regime in Russia, orienting the individual to inclusion in the professional production spheres of the regions of residence, and the acquisition of a stable legal status. The willingness to adapt to new living conditions rather than continue the anti-Bolshevik struggle, which was the meaning and structure-forming core of the White movement, led most of the former military to abandon further participation in the anti-Soviet movement. Moreover, in Northeast China, where there were elements of the Russian socio-cultural environment and Russian spheres of employment, the most favorable conditions for the social adaptation of the former military had developed. On the contrary, the so-called irreconcilable ones deliberately excluded themselves from the adaptation process, including refusing to create a family and getting a “peaceful” profession.

After the end of the civil war and intervention, in the 1920s and 1930s, the activities of the White Movement leaders in Northeast China continued and developed, and the new White Guard

organizations were set up (by the end of the 1920s, there were more than 30 such organizations), financed by the white immigrant diasporas of Europe and America. Despite the failure of the unification process, military emigration throughout the entire period of the 1920s – early 1940s was the main force of the anti-Bolshevik movement. Mercenaries among Russian emigrants continued to fight in the armies of the Chinese militarists, and participated in the conflict on the CER in 1929. Northeast China White emigration inherited a split in the White Movement in the Far Eastern frontier in 1917–1922. As a losing party, emigration and its leaders tried to find whom to blame for their collapse, learn from it and develop plans for further struggle with the Soviet regime. The withdrawal of a part of emigrants from the pro-Japanese course propagating by some political leaders of Northeast China White emigration later crystallized the patriotic wing of the Russian diaspora in Northeast China.
